

10.3 The challenges of food supply

1 Study the factors affecting food supply in Table 10.2.

transport and storage	climate change	agricultural pests and diseases	war and political unrest
population growth	drought	demand for biofuel	land degradation and desertification

Table 10.2: Factors affecting food supply

Categorise the factors into 'human factors' and 'human and natural factors'.

- 2** Give **one** cause of desertification. [1]
- 3** Give **two** ways human activity can lead to food insecurity. [2]
- 4** Justify the use of food aid in reducing food insecurity in low-income countries (LICs). [3]
- 5** Justify the use of strategies that reduce soil erosion. [3]
- 6** How can food aid improve food security?
- 7** Identify a sustainable method to manage soil erosion.

UNDERSTAND THESE TERMS

- Food aid

- Food insecurity
- Desertification

« RECALL AND CONNECT 1 «

Growing populations put huge pressure on food resources on a local, national and global scale. Similarly to food supply, growing populations also face their own set of challenges. See if you can answer the questions below on [Topic 6, 'Population change'](#).

- a Describe the challenges that a country in Stage 2 of the Demographic Transition Model (DTM) may face.
- b What different challenges could a country in Stage 4 of the DTM face?
- c Explain how a high fertility rate affects the natural increase of a population.
- d Identify one reason why a country might have high fertility rates.
- e Suggest a method that a government could use to address the challenges of a rapidly growing population.
