

2.2 The main landforms associated with these processes

UNDERSTAND THESE TERMS

- Cliff
- Wave-cut platform
- Cave
- Arch
- Stack
- Stump

« RECALL AND CONNECT 1 «

Coasts can provide tidal, solar and wind energy to meet our growing energy needs. Many coastal areas also contain major seaports where food is transported all around the world. Answer the questions below to test your understanding of [Topic 10, 'Resource provision'](#).

- a** What are the benefits of renewable energy?
- b** What are the drawbacks of renewable energy?
- c** Name three inputs used on a farm.
- d** What are some strategies that improve food supply?

1 Match the landform, a-d, with its description, 1–4.

- | | | | |
|----------|----------|----------|---|
| a | headland | 1 | A vertical column of rock that stands alone in the sea, detached from the mainland. |
| b | bay | 2 | A natural opening in a rock face where the sea has eroded through a headland. |
| c | stack | 3 | A curved indentation of the coastline between two headlands. |
| d | arch | 4 | A narrow piece of land that sticks out from the coastline into the sea. |

2 Complete the gaps in these sentences about coastal landforms using the words below.

dunes wave-cut platform direction
constructive waves hook cave marsh
cliff stack hook beach vegetation
bar

- a** As a result of wave action at the base of a _____ , a wave-cut notch can develop over time between the points at which low tide and high tide reach. As the cliff erodes, collapses and retreats over time, a _____ is left behind.
- b** A typical sequence for coastal erosional landforms is: crack, _____ , arch, _____ , stump.
- c** A _____ is a common landform of deposition and occurs in a sheltered area, such as a bay, where waves deposit sand or pebbles. _____ help build up a beach, as they have a greater swash than backwash.
- d** Coastal _____ are formed from loose sand that winds blow onshore. Debris on the beach slows the wind

down, causing the wind to deposit the sand. Over time these sand mounds grow into larger dunes, as more sand is deposited and _____ stabilises them.

- e A spit forms where there is a change in _____ of the coastline, such as at a headland. If the spit continues to grow and is influenced by changes in wave patterns or wind direction, it may curve at its outer end. This forms a _____. Often a _____ develops behind a spit. If a spit continues to grow across a bay and connects two headlands together, it forms a coastal _____.

UNDERSTAND THESE TERMS

- Beach
- Sand dune
- Bar
- Concordant coastline
- Discordant coastline

~~3~~ What landforms may be formed along a discordant coastline and why?

~~4~~ Describe a concordant coastline. [3]

~~5~~ Study Figure 2.2. Describe the landform labelled X in Figure 2.2. [5]

Figure 2.2: A coastal landform

REFLECTION

After reading a 'describe' question, how do you know what the key features or components are that you need to focus on? Do you have any strategies that help you focus on what the question is asking you to do? Now look back at some of your previous answers to 'describe' questions. What made them good?
