

4.3 The impacts of tectonic hazards

REFLECTION

A lot of the impacts of tectonic hazards can be categorised, such as 'primary' and 'secondary'. How many ways can you think of to categorise the impacts of tectonic hazards? Are some ways to categorise tectonic hazards more useful when writing about the impacts of tectonics hazards? How does it depend on what the question is asking? Does this change how you categorise the hazards?

UNDERSTAND THIS TERM

- Lahar

- 1 What negative impacts are associated with ash fall from a volcanic eruption?
- 2 What are some positive impacts of volcanic eruptions?
- 3 What is a lahar?
- 4 Identify **one** scale used to measure earthquakes. [1]
- 5 Identify **one** scale used to measure volcanic eruptions. [1]
- 6 Suggest **two** secondary impacts that could occur after an earthquake. [2]
- 7 Suggest **two** factors that can influence the severity of the impacts of earthquakes. [2]
