

4 Tectonic hazards

24

KNOWLEDGE FOCUS

You will answer questions on:

- 4.1 The structure of the Earth and distribution of earthquakes and volcanoes
- 4.2 The processes and features associated with earthquakes and volcanoes
- 4.3 The impacts of tectonic hazards
- 4.4 Managing the impacts of tectonic hazards

EXAM SKILLS FOCUS

In this topic you will:

- show that you understand the command word 'identify' and answer an 'identify' question
- show that you understand the command word 'suggest' and answer a 'suggest' question.

When you answer a question with the command word 'identify', it is asking you to name/select/recognise something. In a question on

tectonic hazards, for example, you may be asked to identify the plate boundary where an earthquake has occurred using a tectonic map. Although no explanation is required, your answer must be accurate and directly linked to the data or image provided.

'Suggest' means to apply knowledge and understanding to situations where there are a range of valid responses in order to make proposals/put forward considerations. Unlike questions with fixed answers, 'suggest' questions test your ability to think logically, make predictions and consider different geographical factors. For example, if an earthquake causes widespread destruction in a city, you might suggest that the buildings were poorly constructed and did not have adequate earthquake protection.
