

6.2 Population structures change over time

1 Draw a population pyramid for:

- a** an ageing population
- b** a youthful population.

2 Give some examples of factors that could cause 'indentations' on a population pyramid. Figure 6.1 shows an example of an 'indentation'.

Figure 6.1: A population pyramid showing 'indentations'

<< RECALL AND CONNECT 2 <<

Growing populations impact the natural environment as urban areas expand to accommodate more people. See if you can answer the questions below on [Topic 1, 'Rivers'](#).

a Define the following key terms:

- Evaporation
- Transpiration
- Interception

- Percolation
- Saltation
- Traction

- b** Using labelled diagrams, explain the formation of a waterfall.
- c** Identify two hazards of living near a river.

When answering 'define' questions, you need to give an accurate definition of the key term in question. Try not to repeat the key term in your answer; instead, you may need to use synonyms (other words with the same meaning).

~~3~~ Define an ageing population. [1]

~~4~~ Define population structure. [1]

~~5~~ Define natural increase. [1]

UNDERSTAND THESE TERMS

- Population pyramid
- Ageing population
- Youthful population
- Population structure

REFLECTION

How confident do you feel defining key terms? What is your strategy to help you learn and remember key terms? Could you improve your recall of definitions by changing your revision technique?
