

7.1 Where people live

« RECALL AND CONNECT 1 «

Rates of urbanisation are affected by population change. Increases or decreases in population impact urban areas by changing the demands on infrastructure, housing, services and employment. See if you can answer these questions linked to [Topic 6, 'Population change'](#).

- a** Which type of country is most likely to experience the greatest population growth over the next 25 years?
- b** Give three factors which influence population change.
- c** Give three push factors for migration.
- d** Give three pull factors for migration.

Some students ignore or misunderstand the command word 'evaluate' and instead write a description or explanation of something. You must respond to the command word in the question, so it is important you understand the difference between 'evaluate' and other command words. Look at the following questions to see if you can answer 'evaluate' questions.

- 1** Evaluate the extent to which push and pull factors contribute to urbanisation in LICs. [7]
- 2** Evaluate the challenges faced by cities in LICs due to rapid urban growth. [7]

REFLECTION

Do you understand the difference between 'evaluate' questions and other types of questions? In Questions 1 and 2, 'evaluate' means to consider different perspectives and make a judgement about the degree or importance of each. In other questions, evaluate can mean to discuss the strengths and weaknesses and come to a conclusion.

To reinforce your learning, try creating your own 'evaluate' questions based on what you've studied. This approach can help you develop a deeper understanding of the topic.

UNDERSTAND THESE TERMS

- Urbanisation
- Migration
- Natural increase
- Urban growth

3 Copy the following text and complete by choosing the correct word in the brackets.

In 2024, (**over/nearly**) half of all people lived in cities. It is estimated that by 2050, (**nearly/more than**) seven out of every ten people will live in cities. The number of megacities, which are cities with over ten million people, is increasing. (**Most/Few**) megacities are now in Asia, Africa and Latin America.

4 What are two causes of urban growth in LICs?

5 Push factors make people want to leave an area and pull factors encourage people to move to an area. In LICs, the direction of movement is often from rural to urban areas.

Sort the key terms from Table 7.1 into two categories: push factors from rural areas and pull factors to urban areas.

Lack of healthcare and schools
Extreme weather events that can destroy crops
Jobs that offer a higher rate of pay
Poor infrastructure: inadequate roads, transportation and communication systems
Higher standard of living
The 'bright lights' effect: the belief that life will be easier in cities
