

7.3 The management of urban growth

1 Match the key terms, a–d, with their definitions, 1–4.

- | | | | |
|----------|------------------------------|----------|--|
| a | Sustainable urban management | 1 | Urban management schemes planned by the government. |
| b | Top-down development | 2 | An urban management strategy that involves residents by providing them with building materials, tools and training that they use to construct and improve their homes. |
| c | Self-help scheme | 3 | Urban management schemes planned by small, non-government organisations often involving local people. |
| d | Bottom-up development | 4 | A city's use of resources and space in a way that meets the needs of its residents today without negatively impacting residents' needs in the future. |

2 Green roofs and urban gardens are examples of green infrastructure. What do you think is meant by the term 'green infrastructure'?

« RECALL AND CONNECT 2 »»

The growth of cities often leads to increased energy consumption and greater demand for transportation, which both generate

carbon emissions and lead to climate change. As urban areas expand, there are also more impermeable surfaces and fewer green spaces, so less carbon is absorbed into the landscape. See if you can answer these questions linked to [Topic 5, 'Climate change'](#).

- a** State two human causes of climate change.
- b** What is thermal expansion?
- c** What is the difference between mitigation and adaptation?

3 State **two** challenges that urban planners face as a result of urban growth. [2]

69

4 Study Figure 7.1, which shows information about the city of Stockholm. State **two** sustainable features of Stockholm. [2]

Stockholm aims to be fossil fuel-free by 2045 and already generates most of its electricity from renewable sources, such as wind and hydropower. On a normal day, around 850 000 people use public transport, such as the underground metro system, electric buses and ferry services. Despite this, car traffic still contributes to air pollution. Around 90% of homes are connected to a district heating system, which heats homes using excess heat from industry and electricity generation. The city also has hundreds of parks and green roofs that help manage stormwater. Property prices in the city are higher than in other parts of the country.

Figure 7.1 Sustainability in Stockholm

5 Evaluate the effectiveness of congestion charging as a strategy to manage urban traffic. [7]

UNDERSTAND THESE TERMS

- Bottom-up development
- Congestion charge scheme
- Green infrastructure
- Self-help scheme
- Sustainable urban management
- Top-down development

SELF-ASSESSMENT CHECKLIST

Let's revisit the knowledge focus and exam skills focus for this topic.

Decide how confident you are with each statement.

Now I can	Show it	Needs more work	Almost there	Confident to move on
Explain where people live	State two reasons for rapid urban growth in LICs.			
Understand the opportunities and challenges of urbanisation	What are the opportunities and challenges of rapid urban growth and urban sprawl?			
Evaluate strategies for managing urban growth	How successful have strategies to manage urban growth been in a named area you have studied?			
Understand the command	Answer an 'evaluate' question			

Now I can	Show it	Needs more work	Almost there	Confident to move on
word 'evaluate'	confidently, such as 'Evaluate the extent to which building on brownfield sites is better than building on greenfield sites.'			
Understand the command word 'state'	Answer a 'state' question confidently, such as 'State two environmental challenges associated with urban growth in LICs.'
