

9.1 Changing employment structures

- 1 Copy and complete Figure 9.1 to show the four sectors of the economy and examples of job types that fit within each sector.

Figure 9.1: Classification of the sectors of the economy

► Image Description

- 2 The global industrial shift refers to the trend of manufacturing processes moving away from HICs to new industrialised centres. There are many factors involved in this global shift; some that make the transition to LICs easier and some that make it more challenging.

Match the following factors, a–e, to their explanations, 1–5.

Factors

a labour

Explanations

1 The availability of specialist machinery and reliable

			communications networks is important for most businesses.
b	containerisation	2	A skilled workforce at a comparatively lower cost increases profit.
c	technology	3	Time zones and spoken language vary between different countries.
d	political policies	4	Easier and faster transport and distribution of products makes it easier to move products between countries.
e	communications	5	Benefits such as tax exemptions or free trade zones reduce business costs.

3 Of the factors listed in Question 2, which typically make the global shift in industry easier (pull factors), and which make it more challenging (push factors)? Explain your answers.

REFLECTION

Sometimes, arranging facts in a different way encourages you to think more carefully about them. Diagrams, flow charts and tables can help us to remember information more easily than reading it as continuous text. Do the diagram and table in Questions 1 and 2 help you remember the content more easily? Do diagrams help you remember links between information and key facts and figures? Consider how you can use diagrams, flow charts and tables in your revision of this topic and others.

UNDERSTAND THESE TERMS

- Containerisation
- Global industrial shift
- Primary sector
- Secondary sector
- Tertiary sector
- Quaternary sector

« RECALL AND CONNECT 1 «

Economic changes within a country can influence government policies, such as those about population. For example, rapid economic growth can increase the demand for labour. If this happens, a government might implement policies to increase birth rates or attract migrants. See if you can answer these questions linked to [Topic 6, 'Population change'](#).

- a What is the difference between a pro-natalist and an anti-natalist population policy?
- b Can you name a country that has implemented one of these policies?

Locating something is about accurately and precisely finding its specific position. Many people think about location as just being something that is found on a map, but this isn't always true. A question could ask you to locate something on a graph, or image, for example. Try the following 'locate' questions to see if you can accurately and precisely answer this type of question.

- 1 Study Figure 9.2, which shows the exports of goods and services (as a % of GDP) for Albania over time. On a copy of

Figure 9.2, locate two points on the graph where significant decreases in the exports of goods and services (as a % of GDP) have occurred. [2]

Figure 9.2: Exports of goods and services (as a % of GDP) – Albania
